DETEILED ACTION

1. Applicant's election without traverse of invention Group I, claims 1-19 in Paper No. 5 is acknowledged.

2. Claims 20-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 5.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections 35 U.S.C. § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1, 4-14, 17 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. The phrase "high molecular weight" in claim 1 is a relative term which renders the claim indefinite. The phrase "high molecular weight" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The claims are indefinite as to the molecular weight of the alcohol.

Art Unit: 1617

4. The term "long chain" in claim 12 is a relative term which renders the claim indefinite. The term "long chain" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The claims are indefinite as to the chain length of the alcohol.

5. Claim 10 recites the limitation "long chain alcohol" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections 35 U.S.C. § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cain et al. (EP 0, 901,804, IDS) in view of Kimura (CAPLUS Abstract, 1994:321866), Hohnen Oil Co. (CAPLUS Abstract, AN 1986:18914) and Tanaka (CAPLUS Abstract, AN 1989:153130)

8. Cain et al. teaches a fat-containing product and the method of making the same. The method comprising mixing edible oil with fatty alcohol of at least 20 carbons, preferred 24-34 carbon and incorporated the mixture into food products. The amounts of the fatty alcohol is about 0.005-10% by weight. A variety of foods may be made from the fatty alcohol containing mixture, e.g., spread creams, ice creams. See, page 2, lines 3-58. No particular limitation regarding the edible oil employed in the mixture. See, page 3, lines 1-9. The mixture has reduced viscosity. See particularly, the claims.

Art Unit: 1617

9. Cain et al. does not expressly teach the employment of the particular vegetable oil or the particular food products herein, such as non-continuous oil phase products.

10. However, Hohnen Oil Co., and Kimura teaches that employment of vegetable oil, such as soybean oil and corn oil for solubilization of fatty alcohols is known. Tanaka teaches that it is known to employ oil-fatty alcohol mixture for making oil in water emulsion (non-continuous oil phase). Further, using the alcohol-oil mixture taught by Cain to make a particular non-continuous oil phase food products is considered within the skill of artisan, absent evidence to the contrary. Further, optimization of the mixing procedure herein, e.g., the temperature, is considered within the skill of artisan.
